

42 Luanda

ISPTEC - Building of Professional Laboratories, 2nd floor

Talatona, Luanda

ANGOLA

ACADEMIC RESULTS OF NDONDA MATONDO

I, the undersigned Nyanga Tyitapeka, Director-General of 42 Luanda, located at ISPTEC - Building of Professional Laboratories, 2nd floor, Talatona, Luanda - ANGOLA, hereby certify that:

Ndonga Matondo, born on February 14, 2004 in Luanda (Angola)

achieved the ratings detailed below as of September 04, 2026.

This certificate is issued upon request and for legal purposes.

Selected in: January 2024

Curriculum start date: May 13, 2024

Curriculum end date: -

Founded in 2013, 42 is a global network of Information and Communication Technology (ICT) schools. We are a non-traditional education center offering high-quality software engineering training, accessible to anyone who wants to learn.

Our mission is to prepare the next generation for the jobs of today and tomorrow. We do this through an innovative educational model, based on peer-to-peer learning, hands-on projects, and a practical approach to programming. This model, which adapts to each student's individual pace and path, has shown that our graduates become job-ready software engineers in just 2 to 5 years.

The student's progression through the curriculum is represented by their level, out of a total of 21 levels. **The student's current level is: 12.12.**

The 42 curriculum is divided into two parts: the common core and the advanced phase (42 advanced). After completing the common core, students may choose to move on to the advanced phase or end their journey, becoming alumni at any point during this second stage. **The student's current status is: in the 42 advanced part.**

See details below.

Done in Luanda, on September 04, 2026

Nyanga Tyitapeka

DETAILS

Below is the description of each part of the curriculum and the student's current position:

The Common Core

The common core of the 42 curriculum represents the minimum set of skills required to be ready for a first professional experience. It provides basic, standardized programming skills, as well as a significant range of soft skills. The estimated period for the common core is approximately 1 to 2 years. The following information represents the skills developed during this part of the curriculum and the student's current progress: **Ndonda Matondo : Common core completed at: 100%.**

Skills developed throughout the common core:

- **Algorithms & AI:** Standard algorithms on standard structures: search, sorting, insertion, deletion, balancing in: arrays, linked lists, trees. State machines and asynchronous management.
- **Graphics:** Image management, RGB structure of an image, area manipulation, drawing on an image, interaction with the window management system, and obtaining events and user input from keyboard and mouse, callback-based programming and the event loop.
- **Teamwork & interpersonal skills:** Collaboration, relationship-building, and group management, including different types of interactions between people (friendship, conflicts, etc.).
- **Imperative programming:** Basic C coding concepts: C syntax, variables, loops, conditionals, functions, recursion, statements, computation and expressions, comparison operators, standard and advanced types, string processing, structures, includes and libraries, memory allocation and freeing, linked lists, trees, the C standard library.
- **Networking & systems administration:** Fundamentals of computer networks: IP addresses, subnets, standard routing, local network structure, host-to-network-service connectivity; Fundamentals of systems administration: operating system (Linux) installation, security configuration, access, users, storage, installation of network services such as email, DNS, web server, etc.
- **Object-oriented programming:** Principles of object-oriented programming in C++: classes, namespaces, constructors and destructors, memory management in C++, inheritance, abstraction, overloading, templates, standard C++ library types and tools.
- **Rigor:** The need to meet administrative and technical requirements. The need for a broad and thorough testing process to eliminate flaws.
- **Systems programming:** Classic Unix interactions: system calls, file system access and management, process creation, execution and management; inter-process communication: pipes and signals; device management and ioctl, terminal capabilities; network communications: TCP & UDP sockets, DNS resolution, endianness.
- **Web:** The client-server architecture on the web, the role and actions of the web server, the role and actions of the browser; The HTTP protocol; Web technologies involved: HTML, CSS, JavaScript, images and videos; Back-end language and framework for dynamic websites: among PHP, Ruby, Python, Go, JavaScript, Rails, Symfony, Django, Node, etc.; MVC model; web services for users: web sessions, authentication, cookies, search, shopping cart, backoffice configuration, etc.; Basic concepts of UX, user interface and design.

Details of each validated project in appendix 1.

The Advanced Part (42 Advanced)

42 Advanced offers a set of possible paths across various ICT specializations: each student can select the theme(s) they wish to deepen and develop. This part of the curriculum also includes various professional experiences (internships, part-time work, ...).

No projects completed yet

Professional experience: no professional experience yet

Details of validated projects in appendix 2.

SPECIALS

The student may eventually benefit from special programs or projects that contribute to their personal skill set, and are therefore included in the curriculum. They are mentioned here:

Name	Equivalent workload
-	

APPENDIX 1

Projects completed during the common core:

Name	Estimated workload	Result	Associated skills	Validation date
Libft	70H	Pass with bonus	Algorithms & AI, Imperative programming, Rigor	May 22, 2024
get_next_line	55H	Pass with bonus	Algorithms & AI, Unix, Rigor	June 06, 2024
ft_printf	55H	Pass	Algorithms & AI, Rigor	June 10, 2024
Born2beroot	50H	Pass with bonus	Network & system administration, Rigor	June 12, 2024
Exam Rank 02	0H	Pass		July 02, 2024
minitalk	50H	Pass with bonus	Unix, Rigor	July 12, 2024
so_long	60H	Pass with bonus	Graphics, Imperative programming	August 30, 2024
push_swap	50H	Pass	Unix, Algorithms & AI, Imperative programming, Rigor	September 14, 2024
Exam Rank 03	0H	Pass		September 19, 2024
Philosophers	70H	Pass	Imperative programming, Unix, Rigor	October 15, 2024
minishell	210H	Pass	Imperative programming, Unix, Rigor	February 09, 2025
cub3d	280H	Pass with bonus	Algorithms & AI, Rigor, Graphics, Imperative programming	May 26, 2025
NetPractice	50H	Pass	Network & system administration, Rigor	June 04, 2025
CPP Module 00	22H	Pass	Rigor, Object-oriented programming, Imperative programming	June 18, 2025
CPP Module 01	12H	Pass	Object-oriented programming, Imperative programming, Rigor	July 07, 2025
CPP Module 02	12H	Pass	Object-oriented programming, Imperative programming, Rigor	July 14, 2025
Exam Rank 04	0H	Pass		July 24, 2025
CPP Module 03	12H	Pass	Object-oriented programming, Imperative programming, Rigor	July 25, 2025
CPP Module 04	12H	Pass	Object-oriented programming, Imperative programming, Rigor	July 26, 2025
CPP Module 06	25H	Pass	Object-oriented programming, Imperative programming, Rigor	August 07, 2025
CPP Module 07	25H	Pass	Object-oriented programming, Imperative programming, Rigor	September 17, 2025
CPP Module 05	25H	Pass	Object-oriented programming, Imperative programming, Rigor	September 18, 2025
CPP Module 08	25H	Pass	Object-oriented programming, Imperative programming, Rigor	September 26,

				2025
CPP Module 09	40H	Pass	Object-oriented programming, Imperative programming, Rigor	October 12, 2025
Inception	150H	Pass with bonus	Network & system administration, Rigor	February 24, 2026
Exam Rank 05	0H	Pass		March 12, 2026
webserv	175H	Pass with bonus	Network & system administration, Object-oriented programming, Unix, Rigor	April 14, 2026
Exam Rank 06	0H	Pass		April 23, 2026
ft_resume	15H	Pass	Adaptation & creativity, Organization, Group & interpersonal	May 12, 2026
ft_transcendence	245H	Pass with bonus	Web, Group & interpersonal, Rigor	July 26, 2026

APPENDIX 2

Projects completed during 42 advanced:

Name	Estimated workload	Result	Associated skills	Validation date
-				

Internships and professional experiences				
Company name	Duration	Validation	Skills	Validation date
-				

APPENDIX 3

Description of each project completed:

Name	Description
Libft	This project is your very first project as a learner at 42. You will need to recode a few functions from the C standard library, as well as some other utility functions that you will use throughout your whole curriculum.
get_next_line	Whether it's a file, stdin, or even later a network connection, you'll always need a way to read content line by line. It's time to start working on this function, which will be essential for your future projects.
ft_printf	This project is pretty straightforward, you have to recode printf. You will learn what is and how to implement variadic functions. Once you validate it, you will reuse this function in your future projects.
Born2beroot	This project aims to introduce you to the wonderful world of virtualization.
Exam Rank 02	This project will evaluate your abilities and knowledge about programming.
minitalk	The purpose of this project is to code a small data exchange program using UNIX signals. It is an introductory project for the bigger UNIX projects that will appear later on in the cursus.
so_long	This project is a small 2D game with minilibx. You'll learn about textures, sprites and tiles.
push_swap	This project involves sorting data on a stack, with a limited set of instructions, and using the smallest number of moves. To make this happen, you will have to manipulate various sorting algorithms and choose the most appropriate solution(s) for

	optimized data sorting.
Exam Rank 03	This project will evaluate your abilities and knowledge about programming.
Philosophers	This project aims to teach concurrent programming, focusing on multithreading and multiprocessing.
minishell	The objective of this project is for you to create a simple shell.
cub3d	This project is inspired by the world-famous eponymous 90's game, which was the first FPS ever. It will enable you to explore ray-casting. Your goal will be to make a dynamic view inside a maze, in which you'll have to find your way.
NetPractice	NetPractice is a hands-on networking project featuring 10 progressive levels that teach essential computer networking fundamentals. Through interactive problem-solving, you'll master TCP/IP addressing, subnet masks, default gateways, routing, and OSI layers by troubleshooting and configuring non-functioning network diagrams. This browser-based training provides practical experience in network administration, preparing you for real-world system administration and networking challenges.
CPP Module 00	This first module of C++ is designed to help you understand the specificities of the language when compared to C. Time to dive into Object-Oriented Programming!
CPP Module 01	This module is designed to help you understand memory allocation, references, pointers to members, and the usage of the switch statement in C++.
CPP Module 02	This module is designed to help you understand ad-hoc polymorphism, function overloading, and orthodox canonical classes in C++.
Exam Rank 04	This project will evaluate your abilities and knowledge about programming.
CPP Module 03	This module is designed to help you understand inheritance in C++.
CPP Module 04	This module is designed to help you understand subtype polymorphism, abstract classes, and interfaces in C++.
CPP Module 06	This module is designed to help you understand the different types of casting in C++.
CPP Module 07	This module is designed to help you understand templates in C++.
CPP Module 05	This module is designed to help you understand try/catch and exceptions in C++.
CPP Module 08	This module is designed to help you understand templated containers, iterators, and algorithms in C++.
CPP Module 09	This module is designed to help you understand containers in C++.
Inception	Broaden your system administration skills by working with Docker. In this project, you'll set up a complete infrastructure using Docker Compose, creating and managing multiple containerized services including NGINX with SSL/TLS, WordPress with php-fpm, and MariaDB. You'll gain hands-on experience with containerization, networking, volume management, and secure web service deployment within your own personal virtual machine.
Exam Rank 05	This project will evaluate your abilities and knowledge about programming.
webserv	This project aims to create your own HTTP server. You will be able to test it with a real web browser. HTTP is one of the most used protocols on the internet. Knowing its intricacies will be useful, even if web development is not on your career path.
Exam Rank 06	This project will evaluate your abilities and knowledge about programming.
ft_resume	Build your communication and self-reflection skills by working closely with a peer. Through mutual interviews, you'll learn to recognize and express both your strengths and theirs—helping you craft genuine, effective resumes.
ft_transcendence	Design, develop, and organize a full-stack web application with complete creative freedom. Choose your project concept, select from a wide range of technical modules, and make key architectural decisions. This highly flexible project allows you to explore modern web development while demonstrating your technical skills and creativity through a modular approach.
